

Freezing Equilibrium: Nash payoffs under the r4 specification

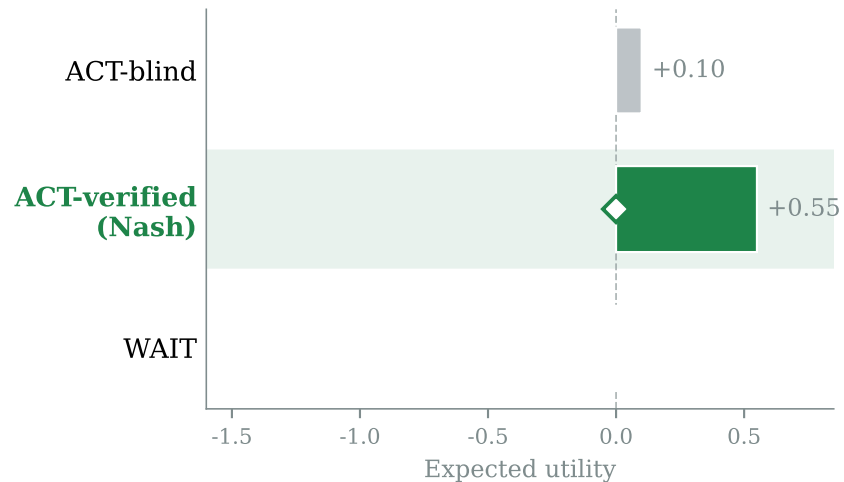

Without Scaffolding

$p = 0.30$, $U_{\text{act}} = 1.0$, $L = 2.0$, $C_{\text{ver}} = 0.50$

With Scaffolding ($C_{\text{ver}} \downarrow$, $p \uparrow$)

$p = 0.70$, $U_{\text{act}} = 1.0$, $L = 2.0$, $C_{\text{ver}} = 0.15$

Payoffs: $u(\text{ACT-blind}) = pU_{\text{act}} - (1-p)L$ · $u(\text{ACT-verified}) = pU_{\text{act}} - C_{\text{ver}}$ · $u(\text{WAIT}) = 0$
